Disrupting Class with CLaaS®

Lithan is a peer2peer digital learning and talents platform with a mission to develop future ready talents and enterprises for the digital economy.

We aim to plug regional inequality with a Digital Learning and Talents Platform. The platform will connect students, talents, enterprises, industry practitioners and institutes of higher learning for an affordable digital career induction and workforce digital upskilling to develop global ready talents for deployment across Asia.

CLaaS®, which stand for Competency Learning as a Service, delivers mass customized learning for students, professionals and enterprises over the cloud, on-demand. It leverages on competency-based curriculum, innovative learning pedagogy and advanced educational technology to deliver workplace skills utilization for tangible career or business outcome.

CLaaS® comprises of over 10 qualifications, 20 diploma/certifications, 100 modular training programs and can be configured to develop future ready talents and enterprises in the digital economy.

Undergraduate CLaaS® for Digital Careers Induction

For undergraduates, we deliver affordable applied learning programs to develop future ready digital skills for in-demand digital career induction before their graduation. This includes applied degrees for Digital Business, Software Engineering and Digital Systems Administration.

Our learners acquire practical knowledge, apply their skills at the workplace, get exposed to new cultures and build international networks in a work-study learning journey where learning is work and work is learning.

Our learners start their work-study journey with an intensive 12-month bootcamp, where they check into our global virtual campus daily on weekdays from 9 am – 6 pm from our physical campus in the region, for over 2000 hours of guided learning and mentoring from industry practitioners.

On completion of the 12-month bootcamp, the learner will be matched with our pool of international employers to study part time while starting work full time as a paid apprentice, where they will be paid US\$300-US\$600 per month.

Our graduates acquire not just deep domain skills but also broad 21st century competencies, including advanced communication and collaborative skills for working in an international cross culture environment.

With global ready skills and and 3 years of full-time working experience under their belt, we expect our learners to earn double the salary of graduates from conventional universities.

Our work-study degree delivers superior return on education investment where we expect 80% of the cohort to earn more than the tuition fee paid, even before graduation.

Post-Graduate CLaaS® for Digital Upskilling & Transformation

For post-graduate programs, we target adult learners and enterprises for digital upskilling and digital transformation respectively.

For adult learners, we deliver digital upskilling CLaaS® for career transition and enhancement to stay relevant in the digital economy

For enterprises, we deliver digital transformation CLaaS® to facilitate workplace digital upskilling for digital engagement, tech-enabled operations, business intelligence and digital workplace implementation.

Applied CLaaS® Academy Collaboration

We believe no stakeholder will be able to single handedly transform higher education.

We are adopting an eco-system approach, partnering with governments, learners, employers, higher education institutions and industry mentors to build a connected learning and talents platform for developing digital-ready talents and enterprises across Asia.

We propose the setting up of an Applied CLaaS® Academy with local universities to jointly deliver an end2end suite of applied under-graduate and post-graduate degrees to develop future ready talents and enterprises for the digital economy.
